

NOTES:
 When using a vapour permeable (LR) underlay, Forticrete in line with BS5250 recommend that the batten cavity is ventilated from eave to ridge.

This system should not be used in conjunction with ventilated soffits.

Additional extension packs maybe required dependant on insulation depth and roof pitch, refer to drawing number FC-0200.

The fascia board height is determined by pitch of the roof. Refer to fixing instructions for guidance.
