

BeamClamp
Type HT Floorfix M12
Chequer/Durbar plate fixing

This block is a true representation of a BeamClamp HT Floorfix. It is designed to allow chequer/durbar plate flooring to be fixed to the supporting steelwork from the top side only with no access to the underside required. As standard it will fix to steelwork up to 15mm thick but can be used with packers to suit any thickness of steel. Please refer to our catalogue or web site for further details of how it works.
